Operational and Scientific Structures

- **Equipment and/or Laboratories.** For IT-specific activities, the PhD Course offers the PhD students the possibility to use laboratories and facilities located at the Law Section Library of the University of Genoa and within the Albergo dei Poveri facility (IT room).
- **Library Collection**
  - **Volume holdings and coverage of the course topics.** The Law Department has a specialized library offering approximately 160,000 titles that delve into all legal sectors. The Department's Library operates in synergy with the Law Section Library, which provides an equal number of volumes that PhD students can freely consult and borrow.
  - **Journal subscriptions** *(number, years held by the Library, coverage of the course topics)*. The Library is subscribed to 500 current periodicals and holds approximately 800 discontinued periodicals, most of which are located within the Department sections and are freely accessible to PhD students.
- **E-resources**
  - **Databases** *(access to the content of journal bundles and/or book series)*. PhD students can access electronic resources via the University Library System platform. These electronic resources include periodicals and collections (e.g., Il Mulino, Franco Angeli, SAGE, OUP, Cambridge UP, Wiley, Tribuna, WKI), e-books, and Italian and foreign legal doctrine and case-law databases. Furthermore, the Law Library and Department provide direct access, with the assistance of dedicated staff, to other major resources such as HeinOnline, Lextenso, LexisNexis USA and UK, JurisClasseur, Iusexplorer, Giuffrè, Il Sole 24 Ore, and InfoUtet.
  - **Software specifically related to the designated research sectors.** Through the University Library System platform, PhD students can access the GenuaLib+ portal. Via the "Primo Central Index by Ex Libris," this portal allows users to query a vast number of electronic resources, including legal ones (databases, e-journals, articles, and e-books), thereby providing access to the full text online when available, or allowing the use of other services for online text retrieval.
  - **Spaces and resources for PhD students and electronic computing.** PhD students have access to 14 dedicated offices, each equipped with desks, personal computers with internet access, LCD monitors, local printers, and network printers on the floor. 3 additional offices and 1 seminar room (a total of 26 workstations) are also available for individual study.
